

## Week 7

### Lots of Lollies

Frances and Rishi were given a bag of lollies.

They shared them out evenly and had one left over.

Just as they had finished sharing them their friends Kishan, Hayley and Paul came along. They wanted some lollies too, so the children shared them out again between all of them. This time they had two lollies left over.

How many lollies could there have been in the bag?

Once you've had a chance to think about it, look below to see how three different groups of pupils began working on the task.

Sarah, Danielle and Sally said:

"We noticed that 17 works as when there are only two of them they get 8 each, with one left over. But when their friends come along they get three each with 2 left over.

We also notice that 7 works and 27 works, as well as 107."

Poppy began like this:

If the two children end up with one lolly it must be an odd number of lollies. Then three more children come making the total number of children 5. Say they had 1 lolly each when they shared

them, the number of lollies would be 7 because 1 times 5 is 5 add on 2 for the left over ones and it makes seven. If we carry this on to 10 lollies each it shows:

- 1 lolly each - 7 lollies
- 2 lollies each - 12 lollies
- 3 lollies each - 17 lollies
- 4 lollies each - 22 lollies
- 5 lollies each - 27 lollies
- 6 lollies each - 32 lollies
- 7 lollies each - 37 lollies
- 8 lollies each - 42 lollies
- 9 lollies each - 47 lollies
- 10 lollies each - 52 lollies

Here is the start of Phoebe and Alice's work:

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

 Brown = Odd numbers.

 Green = 2 left over when shared with 5 people.

P40 →

Can you take each of these starting ideas and develop it into a solution?
